

UNIVERSAL AI VIDEO RECREATION TEMPLATE

Reference choreography → new character → new environment → new vehicle/object → model-specific prompt

1. UNIVERSAL WORKFLOW

- 01 — Analyze:** camera, framing, lens feel, blocking, action order, timing, speed changes, impacts and ending.
- 02 — First frame:** create the exact starting composition with the new character, environment and vehicle/object.
- 03 — Animate:** use the first frame as the visual anchor and reproduce the reference choreography.
- 04 — Split if needed:** divide the sequence for short model limits and use the previous last frame as the next start frame.
- 05 — Finish:** enhance only after generation; preserve timing, identity and choreography.

2. REPLACEABLE VARIABLES

- <SUBJECT 1> main character / identity reference
- <SUBJECT 2> vehicle, creature, prop or moving object
- <ENVIRONMENT> location, terrain, weather and background
- <SIGNATURE ACTION> snap, gesture, jump, turn, impact, etc.
- <CAMERA> static, locked-off, handheld, tracking, low angle, lens feel
- <TIMELINE> exact action windows in seconds
- <MOTION RULES> acceleration, airborne motion, impact, dust, debris
- <FINAL STATE> exact ending composition
- <AUDIO> diegetic sound and optional music

3. PROMPTS — SIMPLE + UNIVERSAL

A. SIMPLE IMAGE CREATION PROMPT — QUICK COPY

Create a vertical 9:16 cinematic live-action image of <SUBJECT 1> in <ENVIRONMENT>. Preserve the exact identity, face, hairstyle, clothing, body proportions and accessories from the reference image. Place the subject in <POSE / STARTING POSITION>. Add <SUBJECT 2> in the background at <DISTANCE / POSITION>. Use <CAMERA / LENS>, realistic lighting, natural depth of field, believable materials and premium cinematic realism. Keep the composition clean and consistent. No unwanted text, watermarks or redesigns.

B. UNIVERSAL MASTER IMAGE PROMPT — DETAILED

Vertical 9:16 premium live-action cinematic still. The exact person from <Picture 1> is fully referenced. Preserve exact facial identity, facial proportions, hairstyle, clothing, accessories, body proportions and spatial relationship to the scene. The subject is <POSE / ACTION> in <ENVIRONMENT>. <SUBJECT 2> is positioned <POSITION> and retains its exact reference design, proportions, materials and distinctive details. Camera: <CAMERA HEIGHT>, <SHOT TYPE>, <LENS FEEL>. Lighting: <LIGHTING>. Realistic textures, physically believable shadows, natural depth of field and premium live-action cinematic quality. No text, no watermarks, no unwanted redesign.

4. VIDEO PROMPTS — SIMPLE + UNIVERSAL

A. SIMPLE VIDEO PROMPT — QUICK COPY

Starting from the first frame, keep <SUBJECT 1> exactly consistent. Vertical 9:16 cinematic video, <DURATION> seconds, <CAMERA>. <SUBJECT 1> starts in <STARTING POSE> and remains <BEHAVIOR>. <SUBJECT 2> starts at <DISTANCE>, moves <DIRECTION> and performs <MAIN ACTION>. Timeline: <OPENING>; <BUILD-UP>; <MAIN ACTION>; <ENDING>. Keep the subjects consistent, preserve realistic motion and physics, and maintain the environment throughout. No unwanted cuts, identity drift, object redesign, text or watermarks.

B. UNIVERSAL MASTER VIDEO PROMPT — DETAILED

For the target video, at 0.00 seconds, <Picture 1> is fully referenced.

SUBJECT DEFINITIONS:

<Subject 1> is the exact character from <Picture 1>. Preserve exact identity, facial proportions, hairstyle, clothing, body proportions, accessories and spatial relationship to the environment.

<Subject 2> is the exact <VEHICLE / OBJECT> from its reference. Preserve its design, proportions, materials, colors and distinctive structure.

<Environment> is <LOCATION / ENVIRONMENT>. Preserve continuous geography, lighting and background logic.

VIDEO:

Create a premium live-action cinematic recreation in vertical 9:16. Start from the exact first-frame composition. Camera: <CAMERA DESCRIPTION>. Maintain consistent perspective, subject scale and spatial relationships.

At 0.00 seconds, <Subject 1> is already in the exact starting pose. <OPENING ACTION>. From <TIME> to <TIME>, <BUILD-UP>. At <TIME>, <SIGNATURE ACTION>. <Subject 2> begins at <DISTANCE / POSITION> and moves <DIRECTION> with <MOTION BEHAVIOR>.

TIMELINE:

[0.00-X.XXs] Opening / setup.

[X.XX-X.XXs] Trigger / signature action.

[X.XX-X.XXs] Rapid movement / escalation.

[X.XX-X.XXs] Main stunt / airborne / transformation.

[X.XX-X.XXs] Impact / landing / resolution.

[X.XX-END] Final state.

If slow motion is required, apply it only to the specified section. Do not slow the entire video unless explicitly requested.

CONTINUITY:

Keep both subjects visually consistent in every frame. Do not redesign, morph, teleport, duplicate or change either subject. Preserve the environment and camera relationship.

AUDIO:

[KEY SOUND + EXACT TIMING].

[ENGINE / IMPACT / WIND / DUST / AMBIENCE].

Music: [N/A OR MUSIC DESCRIPTION].

NEGATIVE CONSTRAINTS:

No identity drift. No clothing changes. No unwanted cuts. No object redesign. No teleportation. No foreground crossing. No unintended slow motion. No unwanted text, logos or watermarks.

5. MODEL ADAPTATION GUIDE

Gemini / Flow OmniFlash: explicit subject definitions, reference-image mapping, integrated multimodal description, exact timing and continuity constraints.

Seedance: structured subject definitions, shot/action sequence, camera behavior, motion physics and temporal progression.

MiniMax H3: integrated multimodal description plus timeline, soundscape, identity lock and spatial restrictions.

Kling: clear sequential action, subject consistency, camera behavior, motion and negative constraints.

WAN: concise cinematic action blocks with strong camera, subject motion, timing and continuity.

Runway: clear motion instructions, camera movement, subject behavior and exact visual transformation/action.

6. TROUBLESHOOTING BLOCKS

Vehicle/object stays on ground: Add that it is clearly airborne with the required contact points visibly off the ground for a sustained moment.

Vehicle/object crosses in front: Require it to stay entirely behind the main subject and never pass in front of the subject or camera.

Dust covers face: Keep dust behind and beside the subject; face remains clear and sharp.

Identity drifts: Attach the strongest identity reference and lock facial identity, proportions, hair and clothing.

Motion becomes slow too early: Time-dilate only the specified airborne/action section; keep the approach fast and normal-speed.

Vehicle/object changes: Repeat exact reference characteristics and require structural continuity from first frame through final frame.
